## Summary

Full-stack web developer with a background in computer science. Trained at Northwestern University coding boot camp and earned a certificate in full-stack web development. Recognized as a resilient problem-solver, passionate about developing apps, and focused on mobile-first design and development. Strengths in creativity and ability to develop solutions in a fast-paced and diverse team environment.

## Technical Skills

**Front-End:** HTML, CSS, JavaScript, JQuery, PWAs, Responsive Design, React, Handlebars, Bootstrap, UIkit, Material UI, Syncfusion
**Back-End:** Java, Node, Express, MySQL, Sequelize, MongoDB, Mongoose, REST API, GraphQL

## Projects

**Fitness App** |
**GitHub Repo:** https://github.com/AliCelikay/fitness-app |
**Live Link:** https://fitness-enhanced.netlify.app/
- A React front-end application that provides over 1300 exercises for users to browse through with practical examples, choose major muscle groups, search specific exercises, and display related videos on YouTube.
- My Role: Working with API for search customization, building the user interface with Material UI, attaching hooks for component reusability, and adding media queries for multiple screen size functionality
- Technologies: React.js, Node, Javascript, CSS, Material UI, RapidAPI ExerciseDB and Youtube Search and Download

**Marvel Fan Fiction** | **GitHub Repo:** https://github.com/hamzaramzanali/fan-fiction |
**Live Link:** https://stark-sierra-05669.herokuapp.com/
- Full Stack MERN application allows users to follow the CRUD methods while writing stories about Marvel characters, commenting on other users' stories, and searching for characters via the Marvel API.

- My Role: Connected servers, created necessary models, added resolvers, typedefs, mutations, and queries, added authentication of user tokens, connected Axios routes to API, and connected pages and components in tandem.
- Technologies: JavaScript, JQuery, CSS, React, Node, Axios, Express, MongoDB, Mongoose, Apollo, GraphQL, Marvel, Api, React Bootstrap

**Game Of Thrones Api** |
**GitHub Repo:** https://github.com/AliCelikay/GameOfThronesCheatSheet-Project2 |
**Live Link:** https://shrouded-spire-99945.herokuapp.com/
- Full Stack Game Of Thrones inspired site that follows MVC paradigm, uses 2 APIs allowing a user to search and save characters, Express Session npm package for user authentication, Sequalize as the ORM, Handlebars as the template engine
- My Role: Connected servers, set up user authentication, added necessary models, set up Axios routes for the API, set up routes to handle user data, and generate data in Handlebar templates.
- Technologies: Javascript, JQuery, CSS, Node, MySQL12, Sequilize ORM, Bcrypt, Express, Handlebars, Axios, Dotenv, Game of Thrones Api, The Ice and Fire Api, UIkit

## Experience

**MVP Truck Parts**                                                    **2020-2021**
**Warehouse Worker**                                                    **Elk Grove**
- Responsible for packaging and shipping online orders, negotiations **Village, IL** of in-person orders, and the execution of deliveries.
- Undertook loading and unloading merchandise, organizing and keeping records of merchandise in the warehouse and sales front.
- Diligently cleaned and maintained supplies and storage areas in order to ensure 100% compliance with safety regulations.

## Education

**Certificate in Full Stack Web Development**                          **Evanston, IL**
Northwestern University                                                08/2022 - 11/2022

**Associate Degree in Engineering Science**                            **Palatine, IL**
William Rainey Harper College                                          07/2020 - 06/2022
